

```
int pot=A3;

float fMap(float value, float inMin, float inMax, float outMin, float
outMax)
{
    return ((value-inMin)*(outMax-outMin)/(inMax-inMin))+outMin;
}

void setup()
{
    Serial.begin(9600);
}

void loop()
{
    float input=analogRead(pot);
    float percentage=fMap(input,0,1023,0,100);
    Serial.print("Potentiometer: ");
    Serial.println(input);
    Serial.print("Percentage: ");
    Serial.print(percentage);
    Serial.println(" %");
    delay(500);
}
```
